

Synonym

ADIPOQ, Adiponectin, ACDC, ACRP30, APM1, GBP28

Source

Human Adiponectin Protein, His Tag(ADQ-H52H3) is expressed from human 293 cells (HEK293). It contains AA Glu 19 - Asn 244 (Accession # [Q15848](#)).

Predicted N-terminus: Glu 19

Molecular Characterization

ADIPOQ(Glu 19 - Asn 244) Q15848	Poly-his
------------------------------------	----------

This protein carries a polyhistidine tag at the C-terminus

The protein has a calculated MW of 26.4 kDa. The protein migrates as 30-34 kDa under reducing (R) condition (SDS-PAGE) due to glycosylation.

Endotoxin

Less than 1.0 EU per µg by the LAL method.

Purity

>90% as determined by SDS-PAGE.

Formulation

Lyophilized from 0.22 µm filtered solution in PBS, pH7.4 with trehalose as protectant.

Contact us for customized product form or formulation.

Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

Storage

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

SDS-PAGE

Human Adiponectin Protein, His Tag on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 90%.

Background

This gene is expressed in adipose tissue exclusively. It encodes a protein with similarity to collagens X and VIII and complement factor C1q. The encoded protein circulates in the plasma and is involved with metabolic and hormonal processes. Mutations in this gene are associated with adiponectin deficiency. Multiple alternatively spliced variants, encoding the same protein, have been identified.

Clinical and Translational Updates

Human Adiponectin Protein, His Tag

Catalog # ADQ-H52H3
