

#### Synonym

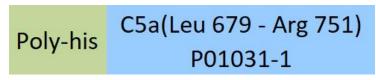

C5a,Complement Component 5a

### Source

Human Complement C5a, His Tag(C5A-H51H9) is expressed from E. coli cells. It contains AA Leu 679 - Arg 751 (Accession # P01031-1).

Predicted N-terminus: His

#### **Molecular Characterization**

This protein carries a polyhistidine tag at the N-terminus

The protein has a calculated MW of 10.2 kDa. The protein migrates as 14-15 kDa when calibrated against <u>Star Ribbon Pre-stained Protein Marker</u> under reducing (R) condition (SDS-PAGE).

#### **Endotoxin**

Less than 1.0 EU per µg by the LAL method.

### **Purity**

>95% as determined by SDS-PAGE.

#### **Formulation**

Lyophilized from 0.22  $\mu m$  filtered solution in PBS, pH7.4 with trehalose as protectant.

Contact us for customized product form or formulation.

#### Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

#### **Storage**

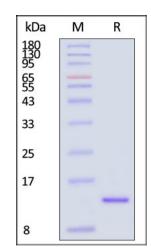

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

### **SDS-PAGE**

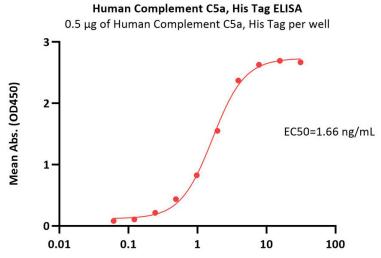

Human Complement C5a, His Tag on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 95% (With <u>Star Ribbon Pre-stained Protein Marker</u>).

### **Bioactivity-ELISA**

# **Human Complement C5a Protein, His Tag**

Monoclonal Anti-Human C5a Human Antibody, Human IgG1 Conc. (ng/mL)

Immobilized Human Complement C5a, His Tag (Cat. No. C5A-H51H9) at 5  $\mu$ g/mL (100  $\mu$ L/well) can bind Monoclonal Anti-Human C5a Human Antibody, Human IgG1 with a linear range of 0.1-4 ng/ml (QC tested).

### Background

Complement Component C5a (C5a) is also known as C5, and is a protein fragment released from complement component C5., is a potent chemotactic factor for human peripheral blood neutrophils and monocytes, and is believed to play an important role in a number of inflammatory conditions. There are several functions in the below: C5a is an anaphylatoxin, causing the release of histamine from mast cells; C5a is effective leukocyte chemoattractants, causing the accumulation of white blood cells, especially neutrophil granulocytes, at sites of complement activation; C5a activates white blood cells by increasing avidity for white blood cell integrins and upregulating the Lipoxygenase pathway for arachidonic acid metabolism; C5a is a powerful inflammatory mediator, and seems to be a key factor in the development of pathology of many inflammatory diseases involving the complement system; C5a modulates balance between activating versus inhibitory IgG Fc receptors on leukocytes, thereby enhancing autoimmune response.

## **Clinical and Translational Updates**
