## Catalog # CD5-M82E3

# ACTO

## Synonym

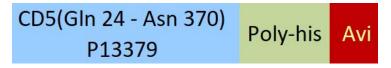

CD5,LEU1

## Source

Biotinylated Mouse CD5 Protein, His,Avitag(CD5-M82E3) is expressed from human 293 cells (HEK293). It contains AA Gln 24 - Asn 370 (Accession # <u>P13379</u>).

Predicted N-terminus: Gln 24

# **Molecular Characterization**

This protein carries a polyhistidine tag at the C-terminus, followed by an Avi tag (Avitag<sup>TM</sup>)

The protein has a calculated MW of 41.4 kDa. The protein migrates as 53-80 kDa when calibrated against <u>Star Ribbon Pre-stained Protein Marker</u> under reducing (R) condition (SDS-PAGE) due to glycosylation.

# Labeling

Biotinylation of this product is performed using Avitag<sup>™</sup> technology. Briefly, the single lysine residue in the Avitag is enzymatically labeled with biotin.

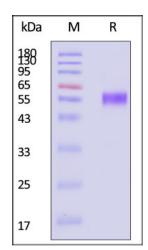

# **Protein Ratio**

Passed as determined by the HABA assay / binding ELISA.

# Endotoxin

Less than 1.0 EU per  $\mu g$  by the LAL method.

# **SDS-PAGE**

#### Biotinylated Mouse CD5 Protein, His, Avitag on SDS-PAGE under reducing

# Purity

>90% as determined by SDS-PAGE.

>90% as determined by SEC-MALS.

## Formulation

Lyophilized from 0.22  $\mu$ m filtered solution in PBS, pH7.4 with trehalose as protectant.

Contact us for customized product form or formulation.

# Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

# Storage

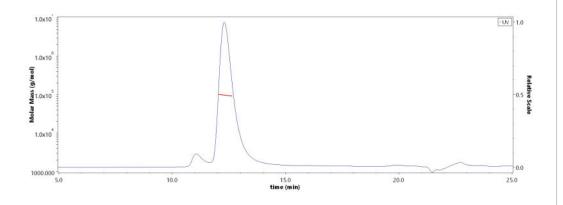

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

# **SEC-MALS**

The purity of Biotinylated Mouse CD5 Protein, His, Avitag (Cat. No. CD5-

(R) condition. The gel was stained with Coomassie Blue. The purity of the

protein is greater than 90% (With Star Ribbon Pre-stained Protein Marker).

M82E3) is more than 90% and the molecular weight of this protein is around 85-105 kDa verified by SEC-MALS. Report

## Catalog # CD5-M82E3

T-cell surface glycoprotein CD5 is also known as Lymphocyte antigen T1/Leu-1 and LEU1, which is phosphorylated on tyrosine residues by LYN, so CD5 can create binding sites for PTPN6/SHP-1.CD5 may act as a receptor in regulating T-cell proliferation. CD5 is expressed at various developmental and activation stages on human B cells.CD5 is a well established negative regulator of TCR and BCR signalling.CD5-positive cells may also prevent the emergence of autoimmunity by provision of cytokines such as IL-10. Development, selection and function of different B- and T-cell subsets or their preferential survival may be directly or indirectly dependent on different glycan structures associated with CD5 or CD5-like molecules.

# **Clinical and Translational Updates**
