Catalog # CD9-M52H3

#### Synonym

CD39,ENTPD1,NTPDase 1,Entpd1,Ecto-ATPDase 1,Ecto-ATPase 1

# Source

Mouse CD39, His Tag(CD9-M52H3) is expressed from human 293 cells (HEK293). It contains AA Thr 38 -Ile 478 (Accession # <u>P55772-1</u>).

# **Molecular Characterization**

CD39(Thr 38 -Ile 478) P55772-1 Poly-his

This protein carries a polyhistidine tag at the C-terminus.

The protein has a calculated MW of 51.7 kDa. The protein migrates as 66-70 kDa under reducing (R) condition (SDS-PAGE) due to glycosylation.

# Endotoxin

Less than 1.0 EU per  $\mu g$  by the LAL method.

# Purity

>95% as determined by SDS-PAGE.

>90% as determined by SEC-MALS.

# Formulation

Lyophilized from 0.22  $\mu$ m filtered solution in 20mM Tris, 150mM NaCl, pH8.0 with trehalose as protectant.

Contact us for customized product form or formulation.

# Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

# Storage

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- $70^{\circ}$ C for 3 months under sterile conditions after reconstitution.

Mouse CD39, His Tag on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 95%.

# SEC-MALS

The purity of Mouse CD39, His Tag (Cat. No. CD9-M52H3) is more than 90% and the molecular weight of this protein is around 60-75kDa verified by SEC-MALS.

### **Bioactivity**

Measured by its ability to hydrolyze the 5'-phosphate group from the substrate adenosine-5'-triphosphate (ATP). The specific activity is  $> 25000 \text{ pmol/min/}\mu\text{g}$  (QC tested).

Catalog # CD9-M52H3

### Background

CD39 is also known as Ectonucleoside triphosphate diphosphohydrolase 1, ENTPD1, NTPDase 1, Ecto-ATPDase 1, in the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation by hydrolyzing platelet-activating ADP to AMP. Hydrolyzes ATP and ADP equally well. NTPDase-1 was originally described as CD39, a B lymphocyte cell surface marker, but it is also present on the surface of natural killer cells, T cells, and some endothelial cells.Regulatory T cells(Tregs) mediate immunosuppression through multiple, non-redundant, cell-contact dependent and independent mechanisms, a growing body of evidence suggests an important role for the CD39-CD73-adenosine pathway. CD39 ectonucleotidase is the rate-limiting enzyme of a cascade leading to the generation of suppressive adenosine that alters CD4 and CD8 T cell and natural killer cell antitumor activities.
