

## Source

Biotinylated Mouse IgG1 kappa Antibody Isotype Control (DNP-BM190) is expressed from human 293 cells (HEK293), which combines the variable region of a mouse monoclonal antibody with Mouse IgG1 constant domain. The mouse monoclonal antibody is produced from a hybridoma resulting from fusion of SP2/0 myeloma and B-lymphocytes obtained from a mouse immunized with IgG control.

## Isotype

Mouse IgG1/kappa

## Specificity

Specifically reacts with DNP (Dinitrophenyl) and DNP conjugated proteins.

## Application

Flow Cytometry (Used as an Isotype Control for FM3-BY54)

## Endotoxin

Less than 1.0 EU per  $\mu\text{g}$  by the LAL method.

## Formulation

Lyophilized from 0.22  $\mu\text{m}$  filtered solution in PBS, 0.5% BSA, pH7.4 with trehalose as protectant.

Contact us for customized product form or formulation.

## Reconstitution

Please see Certificate of Analysis for specific instructions.

*For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.*

## Storage

For long term storage, the product should be stored at lyophilized state at  $-20^{\circ}\text{C}$  or lower.

*Please avoid repeated freeze-thaw cycles.*

This product is stable after storage at:

- $-20^{\circ}\text{C}$  to  $-70^{\circ}\text{C}$  for 12 months in lyophilized state;
- $-70^{\circ}\text{C}$  for 12 months under sterile conditions after reconstitution.

## Bioactivity-FACS

$2 \times 10^5$  of anti-CD19 CAR-293 cells were stained with 100  $\mu\text{L}$  of 1:50 dilution (2  $\mu\text{L}$  stock solution in 100  $\mu\text{L}$  FACS buffer) Biotinylated Mouse IgG1 kappa Antibody Isotype Control (Cat. No. DNP-BM190) and positive control Biotinylated Monoclonal Anti-FMC63 scFv Antibody, Mouse IgG1, Avitag (Cat. No. FM3-BY54) respectively, washed and then followed by PE-SA and analyzed with FACS (QC tested).

$5 \times 10^5$  of PBMCs were stained with 100  $\mu\text{L}$  of 1:50 dilution (2  $\mu\text{L}$  stock solution in 100  $\mu\text{L}$  FACS buffer) Biotinylated Mouse IgG1 kappa Antibody Isotype Control (Cat. No. DNP-BM190) and isotype control Biotinylated Monoclonal Anti-FMC63 scFv Antibody, Mouse IgG1, Avitag (Cat. No. FM3-BY54) respectively, washed and then followed by PE-SA and analyzed with FACS (QC tested).

Catalog # DNP-BM190

BIOSYSTEMS  
**Acro**

A hapten is a small molecule that can elicit an immune response only when conjugated with a large carrier such as a protein. Typical haptens include drugs, urushiol, quinone, steroids, etc. Peptides and non-protein antigens usually need conjugating to a carrier protein (such as BSA (bovine serum albumin) or KLH (keyhole limpet hemocyanin) to become good immunogens). Additionally, haptens should be administered with an adjuvant to ensure a high quality immune response. It is important that the hapten design (preserving greatly the chemical structure and spatial conformation of target compound), selection of the appropriate carrier protein and the conjugation method are key conditions for the desired specificity anti-hapten antibodies. We design anti-hapten antibodies based on the HaptenDB information.
