CD47: SIRP gamma [Biotinylated] Inhibitor Screening ELISA Kit

Pack Size: 96 tests

Catalog Number: EP-160

IMPORTANT: Please carefully read this manual before performing your experiment.

For Research Use Only. Not For Use In Diagnostic Or Therapeutic Procedures

INTENDED USE

This kit is designed for screening of inhibitors of binding between human CD47 and human SIRP gamma.

It is intended for research use only (RUO).

PRINCIPLE OF THE ASSAY

This inhibitor screening ELISA kit is designed to facilitate the identification and characterization of new CD47 pathway inhibitors. The assay takes advantage of our in house-developed binding of biotinylated human SIRP gamma to immobilized human CD47 in a functional ELISA assay and employs a simple colorimetric ELISA platform.

Briefly, we provide you with a human Biotinylated SIRP gamma protein, a human CD47 protein, an anti-CD47 neutralizing antibody (as method verified Std.), and Streptavidin-HRP reagent. Your experiment will include 4 simple steps:

1) Coat the plate with human CD47.

2) Add your molecule of interest to the tests.

3) Add human SIRP gamma-Biotin to bind the coated human CD47.

4) Add Streptavidin-HRP followed by TMB or other colorimetric HRP substrate.

Finally, the half maximal inhibitory concentration (IC50) of your compound to CD47: SIRP gamma binding will be determined by comparing OD readings among different experimental groups.

solution.

2)Add 100μL of Human CD47 working solution (0.8μg/mL) to each well and leave a couple of wells uncoated for No-Coating Control, seal the plate with microplate sealing film and incubate overnight (or 16 hours) at 4℃.

3. Washing

Remove the remaining solution by aspiration, add 300μL of 1×Washing Buffer to each well, gently tap the plate for 1 minute, remove any remaining 1×Washing Buffer by aspirating or decanting, invert the plate and blot it against paper towels. Repeat the washing step above for three times.

Note: For best results, the complete removal of the Human CD47 solution is essential. The use of a manifold dispenser or an auto-washer may be necessary.

4. Blocking

Add 300μL Blocking Buffer to each well, seal the plate with microplate sealing film and incubate at 37℃ for 1.5 hours.

5. Washing

Repeat step 3. At the same time, you can start to prepare your samples.

6. Add Samples

1)Make serial dilution of the samples as appropriate.

2)If you intend to use the provided Anti-CD47 Neutralizing Antibody as a reference (Std.), you may dilute the antibody as recommended in Figure 1.

3)Add 50μL of sample solution to each well according to our recommendation (Figure 2) or your own plate setup.

4)For No-Coating Control wells, please add 50μL Dilution Buffer.

7. Binding

1) Dilute Biotinylated Human SIRP gamma stock solution (100μg/mL) to 2μg/mL with Dilution Buffer to make Biotinylated Human SIRP gamma working solution.

2) For No-binding control wells, please add 50μL Dilution Buffer.

3) For all other wells, please add 50μL Biotinylated Human SIRP gamma working solution to the wells and mix the samples by gently tapping the plate. Seal the plate with microplate sealing film and incubate at 37℃ for 1 hour.
