

#### Synonym

GPC3,OCI5,Glypican-3,GTR2-2,MXR7,DGSX,SDYS,SGB,SGBS,SGBS1

#### Source

PE-Labeled Human Glypican 3, His Tag (GP3-HP2E3) is produced via sitespecific conjugation of PE to Human Glypican 3, His Tag under optimal conditions with a proprietary technology. PE-Labeled Human Glypican 3, His Tag is expressed from human 293 cells (HEK293). It contains AA Gln 25 - His 559 (Accession # P51654-1).

Predicted N-terminus: Gln 25

#### **Molecular Characterization**

Glypican 3(Gln 25 - His 559) P51654-1

Poly-his

This protein carries a polyhistidine tag at the C-terminus

The protein has a calculated MW of 64.5 kDa.

## Conjugate

PE

Excitation Wavelength: 488 nm / 561 nm

Emission Wavelength: 575 nm

#### **Application**

Please note that this product is NOT compatible to streptavidin detection system.

## **Formulation**

Lyophilized from 0.22 µm filtered solution in PBS, 0.5% BSA, pH7.4 with trehalose as protectant.

Contact us for customized product form or formulation.

#### Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

#### **Storage**

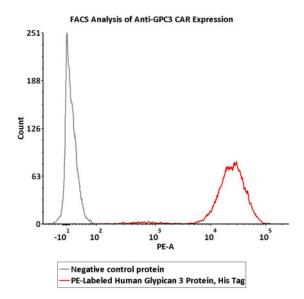

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please protect from light and avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

# **Bioactivity-FACS**

5e5 of anti-GPC3 CAR-293 cells were stained with 100 μL of 1:25 dilution (4 μL stock solution in 100 μL FACS buffer) of PE-Labeled Human Glypican 3, His Tag (Cat. No. GP3-HP2E3) and negative control protein respectively. PE signal was used to evaluate the binding activity (QC tested).

# PE-Labeled Human Glypican 3 / GPC3 Protein, His Tag (Site-specific conjugation)

Catalog # GP3-HP2E3

# **Background**

Glypican-3 (GPC3) is also known as Intestinal protein OCI-5, GTR2-2, MXR7, which belongs to the glypican family. Glypican 3 / GPC-3 is highly expressed in lung, liver and kidney. Glypican-3 inhibits the dipeptidyl peptidase activity of DPP4. Glypican-3 may be involved in the suppression/modulation of growth in the predominantly mesodermal tissues and organs, and also may play a role in the modulation of IGF2 interactions with its receptor and thereby modulate its function.
