

#### Synonym

MCAM,CD146,MUC18

#### Source

Cynomolgus MCAM, His Tag (MCM-C52H3) is expressed from human 293 cells (HEK293). It contains AA Val 24 – Gly 559 (Accession # <u>A0A5F8A4A1-1</u>).

Predicted N-terminus: Val 24

#### **Molecular Characterization**

# MCAM(Val 24 – Gly 559) A0A5F8A4A1-1

Poly-his

This protein carries a polyhistidine tag at the C-terminus.

The protein has a calculated MW of 61.5 kDa. The protein migrates as 80-110 kDa under reducing (R) condition (SDS-PAGE) due to glycosylation.

## Endotoxin

Less than 1.0 EU per µg by the LAL method.

## **Purity**

>95% as determined by SDS-PAGE.

>90% as determined by SEC-MALS.

### Formulation

Lyophilized from  $0.22 \mu m$  filtered solution in PBS, pH7.4. Normally trehalose is added as protectant before lyophilization.

Contact us for customized product form or formulation.

#### Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

## Storage

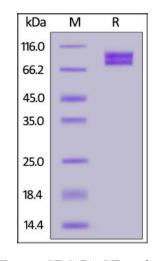

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

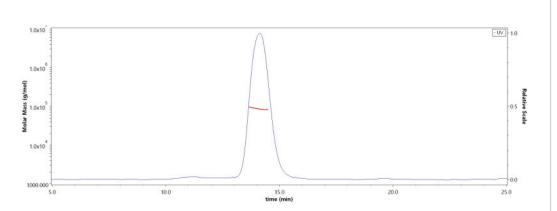

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

## **SDS-PAGE**

Cynomolgus MCAM, His Tag on SDS-PAGE under reducing (R) condition. The gel was stained overnight with Coomassie Blue. The purity of the protein is greater than 95%.

## **SEC-MALS**

The purity of Cynomolgus MCAM, His Tag (Cat. No. MCM-C52H3) was more than 90% and the molecular weight of this protein is around 80-90 kDa verified by SEC-MALS.

<u>Report</u>

## **Background**

CD146, also known as the melanoma cell adhesion molecule (MCAM) or cell surface glycoprotein MUC18, is a 113kDa cell adhesion molecule currently used as a marker for endothelial cell lineage. As a member of the Immunoglobulin superfamily, It is expressed on chicken embryonic spleen and thymus, activated human T cells, endothelial progenitors such as angioblasts and mesenchymal stem cells, and strongly expressed on blood vessel endothelium and smooth muscle. CD146 has

## Cynomolgus MCAM / CD146 Protein, His Tag (MALS verified)

been demonstrated to appear on a small subset of T and B lymphocytes in the peripheral blood of healthy individuals. The CD146+ T cells display an immunophenotype consistent with effector memory cells and have a distinct gene profile from the CD146- T cells. As a Ca2+ independent cell adhesion molecule involved in heterophilic cell to cell interactions and a surface receptor, CD146 triggers tyrosine phosphorylation of FYN and PTK2 and subsequently induced signal transduction, proteolysis or immune recognition.
